

Case Study: Sandia National Laboratories

The Client

Sandia National Laboratories is in charge of providing the technologies that secure the United States' national nuclear stockpile, and developing solutions to protect civilian and military targets against other weapons of mass destruction.

The Challenge

Because of the complexity of the grave tasks the laboratory is charged to complete, the engineers and scientists at Sandia are among the best in the world. When the experts at Sandia needed a database solution for classified information, they had the budget to select the best solution available. As an industry leader with a tradition of innovation, the Sandia National Laboratories engineers required a solution that was reliable and efficient.

The Solution

Jason Coombs, an engineer at Sandia, headed up the project. Coombs was impressed with the responsiveness of ITTIA, and the overall cost and quality of the solution. When Sandia hit a wall in the technical implementation of the solution, ITTIA was right there, providing technical support and consulting.

“ITTIA’s database software solutions and technical support really impressed me the most,” said Coombs. “The engineer ITTIA assigned to my project was very professional, very knowledgeable and very experienced. We were able to solve the issues we came across and kept the implementation on schedule and on budget.”

For many years, ITTIA has offered efficient, fast, and reliable database products to various industry leaders. Highly skilled professionals are touting the benefits of ITTIA database software at organizations such as Glaxo Smith Kline (a world leader in pharmaceuticals), Ohio State University (one of the United States most recognizable universities), Moody's Risk Management Services (a trusted provider of business services) and many others.

Organizations that invest heavily in technology infrastructure naturally prefer to extend and select well-functioning database solutions. ITTIA is committed to provide database technologies for these organizations and assist them to achieve their goals.
